#### **WATER CONSERVATION**

Conservation of Water is very important for all living things. Our institution has the facility of water conservation since 2001. It can store 3, 00,000 liters of water storage. It involves preserving, controlling and developing water resources, both surface water and ground water, and preventing water pollution. In addition to this, the most significant one Rain water harvesting, the collection and storage of Water facility is available inside the campus. Though it is free from harmful chemicals, it is collected, stored and redirected to tank and usage of some other purposes like gardening.
