Trinity	Magazo Ma	hanux	enad	Mamas	ckal-6	37	00	2
Tamilarac	(hereinafter	referred to	as "Instit	tution").				

Whereas, Edunet is a non-profit organization with multiple programs, sponsored by government and corporate entities, that are offered free to learners across the education spectrum, including but not limited to the Tech Saksham Program (<a href="www.techsaksham.org">www.techsaksham.org</a>) and SkillsBuild (<a href="www.skillsbuild.org">www.skillsbuild.org</a>).

Whereas, Institution is a premier institution with the following details:

Established (year):	2000
Recognition, NAAC rating, ranking:	Process is on going
Vision:	Our vision is to build a tasteless and classiess society imparting analyty education

Now therefore, this Memorandum of Understanding (hereinafter called "MOU") witnesses the following.

- Term and termination: This MOU is valid for an initial term of 5 years from the Effective Date. It can be
  extended by further periods, as agreed to by the Parties from time to time. Either Party may terminate
  this MOU by giving the other minimum 30 days' notice. The MOU will be deemed terminated at the
  end of the notice period or after completing all ongoing activities so that the beneficiaries (learners and
  teachers) are not negatively impacted, whichever is later.
- Non-binding nature of this MOU: The MOU is not binding on either Party and each is working with the other out of sheer good-will and for the benefit of the learners.
- 3. Each Party is responsible for its own costs: Both the Institution and Edunet will independently manage their cost towards fulfilment of obligations under this MOU.
- 4. Single Point of Contact (SPOC) for program co-ordination: Both the Parties shall appoint a suitable person who will serve as a single of contact on all matters related to program rollout. Individual learners and teachers may be in touch with corresponding trainers, mentors, advisors and peers during program rollout but all matters related to the execution of this MOU shall reside with the SPOC.
- 5. Society for Inclusive Education (SIE): This is a student led initiative managed and supported by Edunet, that seeks to provide ubiquitous high quality learning opportunities to underserved communities through government and private schools/colleges around India. The Institute will set up a chapter of Society for Inclusive Education on its campus. This chapter will make Edunet programs available to local

underserved institutions and/or student communities through community work, classroom sessions, fund raisers to purchase equipment and free learning platforms. Office bearers will be chosen by the Institute in the first year. They may be either nominated or elected second years. The SIE chapter will have members from within the local student community who are willing contribute some time towards betterment of society. All members of SIE chapter at the Institution will be issued with appropriate certification that will help them meet their CAS/Community Work/SUPW requirements.

Program Calendar: The SPOCs from both Parties will work with their respective internal stakeholders
to develop a calendar for the program(s) rollout at the start of every quarter. This calendar will then by
synchronized and published for use by everyone.

#### 7. Responsibilities of Edunet and/or its program sponsors/partners:

- Orientation sessions: Edunet will conduct orientation sessions for learners and educators, at a mutually agreed schedule, to onboard them onto the program(s).
- Program materials: Edunet will share all program materials with the institution and/or learners as required. All sharing will be online and/or through electronic media.
- c. Face to face, instructor led sessions: For learners in the Tech Saksham Program, face to face ILT sessions will be organized on campus and will be delivered by Edunet Trainers to program beneficiaries
- d. Online instructor led sessions: These sessions may take the form of webinars or mentoring workshops or technology bootcamps or innovation camps or career readiness workshops that will seek to assist learners in their career goals. These programs will be organized regular as per a regular calendar, published online and will be conducted by Edunet team members or program sponsors or external stakeholders as appropriate.
- e. Interaction with Industry experts: Edunet will bring industry experts to the Institute to drive engagements with students through seminars/webinars or project mentorship.
- f. Online platform availability: Online platforms for each of the programs of interest to the Institution will be made available to it. Links for these platforms will be made available to the Institution in a timely manner
- g. Assessments: Edunet will conduct assessments, as required, for its programs prior to certification by Edunet and/or its industry partners and/or participating government agencies.
- h. For programs with career paths: Edunet will provide linkages with local and regional industry, government and the local start-up ecosystem (incubators etc) that will help learners with gainful employment and/or entrepreneurial opportunities. Interactions will be encouraged in terms of classrooms sessions, workshops, internship opportunities, career opportunities and entrepreneurship opportunities.
- SIE support: Edunet will support the SIE chapter in the Institute with all support required. A separate program manual and guidelines will be sent to the SPOC.
- j. Updates: Edunet will keep Institution management updated with the progress of the program(s)

#### 8. Responsibilities of Institution:

- Learner identification: Institute will identify learners, volunteers and instructors who may participate in one or more programs offered by Edunet.
- Support with orientation sessions: Institute will support Edunet conduct orientation sessions for all stakeholders.
- c. Publication of program calendars and goals: Institute will publish, on a quarterly basis, a program calendar for all its participants.
- d. Support with computers labs and classrooms: Institute will make its labs available to learners. It will make classrooms and/or audio-visual equipment available for face to face sessions, whenever required.
- e. Support with attendance: Institute will ensure that program participants enthusiastically

- participate in chosen programs, with minimum attendance as agreed between the Parties.
- Support with assessments: Institute will ensure that assessments carried onsite are proctored and professionally managed.
- g. SIE chapter: The Institute will support the SIE chapter, led by its students, to the extent possible.
- No fees: Institute will not charge any extra fees from learners for participation in Edunet programs.

IN WITNESS WHEREOF, the parties hereto have executed this MOU on the Effective Date.

#### **Abstract**

Agriculture is a vital economic sector that contributes to a country's overall economic growth. According to the Food and Agriculture Society of the United Country, the global population is anticipated to grow up to 70% by 2050. Many recent technological breakthroughs in the sector of farming will aid in the expansion of agricultural activities. The industries of the internet of things (IoT) enable agriculturalists to look at these challenges. IoT Sensors are made to help farmers to decide crop harvests, soil humidity, rainfall, and livestock by IoT sensors. The agriculturalists can access this information by using smart mobiles. This chapter focuses on IoT-enabled smart farming, which allows farmers to examine operational data and make better decisions. The Internet of Things (IoT) deployment platform and communication technologies for smart farming, Precision Agriculture, and Digital Agriculture are discussed.

**Keywords:** IoT, Smart Farming, Digital Agriculture, Precision Agriculture, Sensors.

#### Introduction

IoT means the Internet of Things; it will connect the devices, machines, and tools to the internet with help of wireless technologies. As of now, over 9 billion things are connected to the internet, in the future; it will cross over 20 billion things. Also, we will say this as a M2M (Machine to Machine) connectivity, it extended to households, smart farming, smart city, and smart agriculture [1]. RFID, nanotechnology, sensors, and smart networks are examples of IoT enablers. According to Gartner Research, "The Internet of Things (IoT) is a network of physical items that contain embedded technology to communicate and perceive or interact with their internal states or the external environment."

IoT technology is a trending technology of today's world [2]. It brings a new revolution in each field of the common man's lifetime by building the whole thing smart and

Roads play a vital role to the people live in different places from day to day life, they travel to schools, to work, to shops, and to transport their goods. Even in this modern world, roads remain one of the mediums used most frequently for travel and transportation. The computation of the shortest path between different locations appears to be a key problem in the road networks. Even now, the problem still persists to find the shortest path on road networks. The wide range of applications was introduced to overcome the problem by developing various shortest path algorithms. The main aim of this thesis provides the optimal decision and transport advisory procedure to the passengers. In this research, to investigate Dijkstra algorithm and Floyd algorithm to establish the structure of transportation network and find the shortest path between two cities. It has formulated the optimal decision rules to analyze the time and distance parameters among two cities. It has used Dijkstra and Floyd algorithm in order to compare the performance and provide optimal solution to the passengers.

The cleanroom method of software development ensures the highest quality when developing software. This book outlines the time, purpose, use, and method for employing cleanroom software engineering for quality software. Cleanroom software is a theory-based, team-oriented process for developing very high-quality software under statistical quality control. Cleanroom combines formal methods of object-based box structure specification and design, function-theoretic correctness verification, and statistical usage testing for quality certification. The cleanroom reference model is expressed in terms of a set of 14 processes that comprise the practice of cleanroom software engineering. These processes form a comprehensive guide to cleanroom projects for software project management and performance, process assessment and improvement, and technology transfer and adoption. The subject of statistical testing and its relation to crypto analysis is also discussed. The test may be useful as a first step in determining whether or not a generator is suitable for a particular cryptographic application.

A cluster is the course of action of partition of a prearranged set of data into displace cluster. This is done in such a pattern that the same cluster is alike and data belong to different set is different. The main task of clustering are explorative data mining, and a common technique learning, pattern recognition image analysis, information retrieval, and Bioinformatics. Optimization is the process of finding the most cost effective or highest beneficial alternatives under the given constraints by maximizing desired factors and minimizing undesired ones.

The Bee Colony Optimization algorithm is a population based swarm intelligent family, it has to solved local optima problem and overwrite the demerit of Particle swarm optimization algorithms. BCO are inspired by the principles of natural biological behaviour and circulated communal behaviour of social colonies has shown superiority in production with complex optimization problems. In this thesis, Fuzzy Bee Colony Optimization (FBCO) was wished-for that algorithm furnished incredibly shining effect match up to with other active algorithms such as Fuzzy C-Means and Fuzzy Particle Swarm Optimization.

#### **Abstract**

This chapter presents a discussion of stream processing Big Data analytics and Internet of Things (IoT) with Smart Grid (SG) technology. The beginning of this chapter describes the characteristic features of these three technologies. In current scenario there are hugevolumes of data have been formed that is being processed by big data analytics technology and the usage of Internet of things (IoT) devices are also increased. Yet, such data are not valuable without systematic power. Numerous big data, Internet of Things, Smart Grid and systematic solutions have enabled people to obtain valuable insight into enormous data generated by IoT devices. In the smart city, there are many IoT devices continuously produce a stream of data, whichhas to be analyzed within minimum period of time. In the developing environment applications of Internet of Things (IoT), beside with their capacity to bring together all data from sensors, the best part is to manage the big data too. For this purpose, stream processing big data technology is used to handle those real time continuous data. Smart Grid is an electrical grid that has the purpose of managing the flow of data/electricity via two-way communication which plays an important role of monitoring and managing things remotely. After that, possibilities of integrating these three technologies are discussed. IoTSG is a biggest IoT open adaptive Eco system that bridges the gap between IoT and emerging technologies. For interesting part, the end of the chapter is being enclosed with the future scope of big data analytics with IoTSG.

Keywords: Big data, Smart Grid, Sensors, Internet of things, Remote devices.

#### 1.1 Introduction

Big data deals with large volume of data and management of those vast data. Now-a-days on the other hand, the Internet of Things grown a lot with huge applications on it, with their capacity collecting and also managing the big data velocity dimension. Smart Grid is an electrical grid that has the
